Policies Animal Care Resource Guide
Painful Procedures Issue Date: March 25, 2011

Subject: Painful and Distressful Procedures

References:
AWA Section 2143
9 CFR, Part 2, Sections 2.31(d)(1)(i,ii,iv), 2.31(e)(4), 2.33(b)(4), 2.36(b)(5,6,7)

History:
Replaces letters dated March 1, 1990; November 9, 1990; November 7, 1991;

Justification:
Inspectors and the regulated community have requested guidance on
procedures to avoid or minimize discomfort, distress and/or pain involving
animals.

Policy:
A painful procedure is defined as “any procedure that would reasonably be
expected to cause more than slight or momentary pain or distress in a human
being to which that procedure is applied, that is, pain in excess of that caused
by injections or other minor procedures”. The Institutional Animal Care and
Use Committee (IACUC) is responsible for ensuring that investigators have
avoided or minimized discomfort, distress and pain to the animals;
appropriately considered alternatives to any procedures that may cause more
than slight or momentary pain or distress; and consulted with the attending
veterinarian in the planning of the procedures.

Examples of procedures that may cause more than momentary or slight pain
include, but are not limited to, the following:

**Surgery (survival or terminal):** considered a painful procedure in
which pain is alleviated by anesthesia. Survival surgery may also
require the use of peri-operative analgesia.

**Freund’s Complete Adjuvant:** may cause a severe inflammatory
reaction depending on the species and route of administration.

**Ocular or Dermal Toxicity Testing:** the dosing procedure itself is
generally not painful but the reaction caused by the product being
tested may cause pain.

Examples of procedures that may cause more than momentary or slight
distress include, but are not limited to, the following:

**Food and/or water deprivation or restriction** beyond that necessary
for normal presurgical preparation.

**Noxious electrical shock or thermal stress** that is not immediately
escapable.

**Paralysis or immobility** in a conscious animal.

**Forced exercise** (e.g., swimming or treadmill protocols).

**Infectious and inflammatory disease models.**

Some procedures, including any of those in the lists above, may cause both pain and distress. Examples of procedures that may cause more than momentary or slight pain as well as distress would include studies involving extensive irradiation, inhalation toxicity studies or those involving tumor growth.

Animals exhibiting signs of pain, discomfort, or distress such as weight loss, decreased appetite, abnormal activity level, adverse reactions to touching inoculated areas, open sores/necrotic skin lesions, abscesses, lameness, conjunctivitis, corneal edema, and photophobia are expected to receive appropriate relief unless written scientific justification is provided in the animal activity proposal and approved by the IACUC.
