The Jackson Laboratory Seminar at
University of North Carolina at Chapel Hill

Seminar is located in Bioinformatics 1131

11:30 - 12:00 noon  Meet & greet - Bioinformatics Lobby
12:00 - 1:00 pm    Mouse Colony Management and Breeding Strategies
1:15 - 2:15 pm     Power of Modeling Human Disease in NSG Mice
2:30 - 3:30 pm     Mouse Models for Autoimmunity & Inflammation

REGISTER TO ATTEND TODAY!

The Jackson Laboratory: Leading the search for tomorrow’s cures

The Jackson Laboratory, a private, nonprofit research institution, has been conducting mouse-based biomedical research for over eighty years. As a result, we have accumulated a tremendous wealth of information related to husbandry, genetics and biology associated with selecting and using laboratory mice in research. We also obtain new knowledge as we provide custom mouse breeding and related support services which is used in our research and the development of additional mouse models. The cumulative knowledge of The Laboratory is shared with researchers around the world through our scientific presentations, technical information services, Web-accessible databases, printed literature and publications, and training programs. For more information about The Jackson Laboratory visit www.jax.org.
