The Michelson Prize & Grants funds researchers to develop the first non-surgical spay/neuter method for both cats and dogs.

THE MICHELSON GRANTS
Michelson Grants of up to $750,000 are available for research in pursuit of this product. Investigators are encouraged to submit a letter of intent for “proof of concept” studies in cell culture, rodents, and/or target species. More than 30% of proposals submitted to date have been approved for funding, totaling over $11 million.

THE MICHELSON PRIZE
The $25 million Michelson Prize will be awarded to the first entity to develop a safe and effective single dose, permanent, non-surgical sterilant for male and female cats and dogs. The winning entry for the Michelson Prize must meet the following criteria:

- Single dose, permanent non-surgical sterilant
- Safe and effective in male and female cats and dogs
- Ablates sex steroids and/or their effects
- Suitable for administration in a field setting
- Viable pathway to regulatory approval
- Reasonable manufacturing process and cost

The Michelson Prize & Grants is open to any entity from any nation. Scientists from a diverse range of fields are encouraged to apply for the Michelson Prize & Grants.
